

To Comcast,

I would like to show my gratitude for receiving this opportunity. I am happy to be recognized as a student that demonstrates success in and out of school. I plan on utilizing this scholarship to further my education in both digital art and animation, as well as programming. I began pursuing a college level education as a junior, but after I graduate high school I will be transferring to a university that either specializes in art or game design after I graduate high school. In the video game industry, a bachelor's degree is not a prerequisite. But the skills I will need to become successful are, and I feel like attending college would be best for me. I need these assets because I plan on pursuing a career in the video game industry. It is likely that I will start my own company. I plan on creating video games with diverse casts. I feel that the game industry is evolving as an art form, and art is one of the primary ways to communicate feelings and important ideas to the rest of the world. As a person of color, I want to be see my people represented more often in these mediums. With this opportunity, I could inspire others through my video games, and communicate important messages to the world. Thank you.

Sincerely,
LaKeisha Morris
